CLOUD CONTENT SECURITY PLATFORM (CCSP)

The world's most adaptive and comprehensive cyber-security platform

With a fully integrated and extensible software-based architecture, FirstWave's Cloud Content Security Platform (CCSP), provides a highly flexible and feature-rich security orchestration platform. It is a product of years of research, innovation, rigorous evaluation, and development, designed specifically to address the key requirements of multi-national Telcos and Managed Security Service Providers (MSSPs).

CCSP normalises the interfaces and management of solutions from multi-vendor security products and automates the multi-tenanted orchestration of security appliances for delivery in multiple cloud environments. The result is a unique, state-of-the-art platform that's white-labelled and being used in delivering cloud security services to millions of users.

KEY HIGHLIGHTS

<p>Automates the multi-tenanted orchestration of security services</p>	<p>Highly flexible and feature-rich security</p>	<p>Allows MSSPs to deliver content security to any size business</p>	<p>“ WE BELIEVE THAT ALL BUSINESSES SHOULD HAVE ACCESS TO ENTERPRISE QUALITY CYBER-SECURITY BECAUSE SAFE BUSINESS IS GOOD BUSINESS ”</p>

GATEWAY PROTECT

CLOUD PROTECT

CLOUD GATEWAY

FIRSTWAVE CLOUD CONTENT SECURITY PLATFORM

Scale to manage millions of partners and users	Rapid deployments globally	Supports multiple clouds and products	Spin up products anywhere with one touch	Single control and view of multiple products and users	Built to add any vendors and regions
DEPLOYS TO TELECOMMUNICATION COMPANIES, DATA CENTRES AND PARTNERS - GLOBALLY					
CLOUD INTEGRATION ONE STOP BILLING SUPPORT & TICKETING					

Email Security

Web Security Services

Firewall

THE VALUE CCSP PROVIDES THE MSSP

FEATURES

Accredited solution: Service provider ready white-labelled platform, with ISO 9001/27001 and Cisco Cloud Managed Security certifications

Accelerated go-to-market: Fully licensed and pre-packaged product catalogue that can be quickly launched to market, sold, and delivered by service providers to their customers

One-touch: Management and orchestration capabilities that are aligned to and compatible with advanced industry standards for NFV architecture such as ETSI NFV

Standardised integration packs: Seamless integration into existing service provider environments through a confluence of intelligence, management and orchestration technology developed in-house

Single pane of glass: Customer and service configuration, orchestration, provisioning, and lifecycle management driven by an easy-to-use management portal

Multi-cloud: Suited for a variety of Service Provider Cloud, Data Centre, and Gateway environments, with ability to deploy in dual HA mode providing redundancy

Ready for operations: Rapid provisioning of new tenants with customisable security products and built-in platform monitoring capabilities, software maintenance & support

VALUE TO THE MSSP

INCREASE REVENUE

Ability to sell security products to enterprise:

- Email, Web, Firewall

Vendor agnostic

- Multi-vendor
- Multi-product

Customer stickiness

- High barriers to exit

Speed to market

- Pre-packaged product offerings
- Fully tested platform

Future growth potential

- Multi-tenancy
- Future products

REDUCE COSTS

Reduce risk to enter security market

- PAYG model

Scalable platform

- Value of PaaS

Operations and support

- L2+ support

Single pane of glass

- Single management platform
- Multi-product

Automation

- MANO
- Log feed SIEM

DEPLOYMENT OPTIONS

Key Selection Criteria	Cloud Gateway (Cloud)	Cloud Protect (Hybrid)	Gateway Protect (On-Premises)
Deployment type	Starter Pack	Starter Pack	Fully Integrated Deployment
Hosted	Public	Public	Private

SUPPORTED SECURITY SERVICES

Products/Services Range	Limited - SaaS Mail only	Limited - Virtual Firewall Service only	Complete - Mail+ Firewall+Web
-------------------------	--------------------------	---	-------------------------------

FEATURES

Reliability/Scalability	Moderate -High	Moderate-High	High
Data Privacy & Control	Moderate	Moderate	High
Customisation - White Label Offering	Very Limited (Portal Logo only)	Very Limited (Portal Logo only)	Full customisation options (Portal and Platform)
MANO Service Descriptors/Repository	Not applicable	Limited	Complete
MANO -VIM/NFVI Trust Level	Not applicable	Moderate ('external')	High ('internal')
Platform-SDN/NFV Integration	No	No	Full customisation options
Telco OSS/BSS Integration (APIs)	No	No	Yes
SLAs	Yes - Limited	Yes - Limited	No – Self Determined
POV available	Yes	Yes	No

PLATFORM LOCATIONS

REQUEST A PROOF OF VALUE TRIAL

As opposed to a proof of concept which really answers the question “does your product work?” A proof of value or POV exercise answers the question “what problems can my product solve for your business?”

Using our cloud security platform which is publicly hosted on AWS, it is easy to evaluate the platform features and security solutions like Cloud Email Security. Our engineers can help you set up this Proof of Value (POV) exercise.

Every customer has different security needs and a unique security environment. As you prepare for your CCSP POV, our team can help you select success criteria that fit your individual needs, and suggest use cases that you can test to validate the success criteria.

SECURITY AND PRIVACY CERTIFICATIONS

FirstWave develops and manages security solutions with emphasis on data and network security, privacy, accessibility and, where required, data sovereignty.

FirstWave’s Privacy Policy and a range of security, operations and compliance policies and processes align Privacy and Data Protection regulations globally including the Australian Privacy Principles, the Privacy Act 1988 (Cth), the General Data Protection Regulation (GDPR EU), Payment Card Industry (PCI) requirements, best practice guidelines including ISO 27001, ISO 9001 and the Information Security Manual (ISM).

ABOUT FIRSTWAVE CLOUD TECHNOLOGY

FirstWave Cloud Technology - a Cloud, network security, and automation technology company, created an intelligent carrier-grade cloud security and orchestration platform for businesses being delivered through a Software as a Service (SaaS) model since 2004. More recently, FirstWave’s specialists have helped to design and deploy highly performing and secured networks and orchestration solutions for some of the most critical projects at the government, financial, and technological institutions in the APAC region.

FirstWave’s proprietary orchestration system provides the control of the cloud-based security platform. While providing services to 450 premier enterprises, this platform offers a broad spectrum of cloud security and analytics technology solutions. This solution, along with advanced mail, web, and content controls, offers unified, integrated, advanced malware protection technology solution for any kind of business or enterprise moving to or operating in the cloud.
