

FirstCloud Mail

Carrier-grade and affordable email security for all businesses

With malware, phishing and ransomware attacks becoming more sophisticated and frequent, businesses must bolster their security against rising threats. Considering how vital it is for companies to protect their personal details and financial integrity, FirstCloud Mail protect your Email service both Inbound and Outbound. FirstCloud Mail uses Cisco's ESA/Ironport and Advanced Malware Protection (AMP) technologies, recognized as market leader by Gartner, IDC & Radicati.

FirstCloud Mail technology secures inbound email from malware, ransomware, phishing, viruses and spam, and also detects advanced persistent threats such as spear phishing, whaling, typo domain and spoofing attacks.

Key Highlights

Carrier-grade, affordable security solution for businesses of any size

Predefined advanced threat protection policies for SMBs

Unique layered protection against malware and ransomware

How it works

FirstCloud Mail

Why choose FirstCloud Mail Service?

A proven and affordable inbound and outbound email security solution

Cisco AMP – Defence against advanced persistent threats and ransomware attacks

Double DLP engine to protect against intellectual property exfiltration

Assured disaster recovery and 32 days trace replay

Ensured 100% uptime using redundant and fault-tolerant infrastructure

24/7 proactive monitoring, alerting and expert support

Rapid service provisioning within 3–5 days with preset policies

Patented image control and marketing/graymail filters for advanced content control

Protection against phishing and BEC attacks through C-level impersonation and typo domain filters

Easy integration with O365 and Gmail

Advanced access, visibility and role-based controls for easier content management

Outbound DKIM: Generate your key and insert DKIM Signature automatically
